Should Fix:

### Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 2 blocking script resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

## Consider Fixing:

### Optimize images

Properly formatting and compressing images can save many bytes of data.

## Mobile

[Optimize the following images](#) to reduce their size by 77.8KiB (50% reduction).

- Compressing <http://larivieracasino.org/images/larivieracasino9.jpg> could save 28.5KiB (54% reduction).
- Compressing <http://larivieracasino.org/images/larivieracasino11.jpg> could save 26.3KiB (52% reduction).
- Compressing <http://larivieracasino.org/images/larivieracasino7.jpg> could save 20.4KiB (51% reduction).

## 67 / 100 User Experience

### Should Fix:

## Configure the viewport

Your page does not have a viewport specified. This causes mobile devices to render your page as it would appear on a desktop browser, scaling it down to fit on a mobile screen. Configure a viewport to allow your page to render properly on all devices.

[Configure a viewport](#) for this page.

## Use legible font sizes

The following text on your page renders in a way that may be difficult for some of your visitors to read. [Use legible font sizes](#) to provide a better user experience.

The following text fragments have a small font size. Increase the font size to make them more legible.
